PATHWAYS : TRAINING & PLACEMENT CELL

Pathways training & placement cell is an only one of its kind of training centre amongst the Colleges of Karnataka offering comprehensive training to students during their graduation for three years. The cell is started by Ford Foundation sponsored global project called "Pathways" in 2002 and now governed by Kuvempu University. The main objective of the project is to identify the academically distinguished students from the socially and economically marginalized sections of the society and to help them access higher education through academic assistance. About twenty-five such students are being selected every year from three each colleges of Sahyadri College campus and helping them to shape their career through training and various innovative activities like computer skills, communication skills, career planning, HRD skills etc. The training is carried out during the free hours of students classes and they take part in daily club activities covering aptitude and reasoning, science and technology, language and culture, book review, current affairs and GK, history, polity and geography, cinema, culture, media etc., also undergo special workshops during the mid-term and summer vacations. Further, student assignments, field visits and community outreach activities, documentary making are conducted during these workshops to instill a sense of social commitment and social responsibility in them. The unit also arranges campus interviews to help job aspirants. The alumni of Pathways are serving in different fields and occupied some coveted positions.

SCILAB/MAXIMA

At the undergraduate level, the curriculum focuses on providing a solid base on a diverse range of mathematical subjects, developing scientific competency, soft skills and life development. FOSS tools like Scilab and Maxima are introduced at the undergraduate level (in accordance with Kuvempu University syllabus). In addition, tools like Matlab and Python are used for data analysis and computation, self-learning through MOOCs, project works and journal club activities are some of the key features.

The Scilab, famous open-source scientific computation software, can be used to test algorithms or to perform numerical computations. Scilab also provides many numerical methods and is very easy to use even for people without prior programming experience.

Maxima is a system for the manipulation of symbolic and numerical expressions, including differentiation, integration, Taylor series, Laplace transforms, ordinary differential equations, systems of linear equations, polynomials, sets, lists, vectors, matrices and tensors. Maxima yields high precision numerical results by using exact fractions, arbitrary-precision integers and variable-precision floating-point numbers. Maxima can plot functions and data in two and three dimensions.
